

How can I efficiently manage and operate my water and wastewater assets?

StruxureWare SCADA Expert ClearSCADA is an open, scalable and integrated SCADA software for plant and telemetry applications

High performance SCADA at lower cost

Optimized for measuring, controlling, monitoring and collecting data across geographically dispersed field operations, SCADA Expert ClearSCADA is recognized as one of the most innovative, flexible and complete SCADA host platforms available today. From a built in historian to alarm redirection, from object-based templates to multi-developer environments, SCADA Expert ClearSCADA is designed to control operational costs through quick deployment and reduced down time, in a security-enhanced, easy-to-use environment.

Efficient solutions to meet your local water management challenges

Your job is to provide water around the clock, and yet you must also respond to challenges and constraints like incidents on the distribution network, water quality, and fluctuating energy costs. SCADA Expert ClearSCADA helps ensure continuous operations and data flow in the event of infrastructure operational issues. Enhanced data security and reliability is achieved through redundant communication paths, seamless backfilling of buffered RTU data, server redundancy and communication encryption. System access is monitored and controlled down to the object level and the built-in event log provides a complete audit trail of operational actions, alarms and events.

Powerful feature set for telemetry & remote SCADA solutions

- Open** Easily integrates to 3rd-party infrastructure, business and IT systems
- Scalability** Facilitates SCADA system expansion with flexible point counts, server redundancy and client licenses
- Reliability** Contributes to ensuring continuous operations and data flow in the event of infrastructure failure
- Security** Provides scalable security permissions to individual users and groups, physical assets and system commands
