

## Energy Rebates and Incentives

Each year, utility agencies offer new rebates and incentive programs to commercial and industrial customers. There are monetary incentives for improvements such as lowering the Nox levels on your gas burner or scaling back the energy used on motors with variable frequency drives. Taking advantage of these programs can make a significant difference in your company's bottom line and the George T. Hall Company is here to help! With many products and solutions that are designed for energy savings, we are well positioned to assist you with your next energy efficiency project. [Check out our Utility Rebates and Incentives page for more information!](#)

## Combustion Efficiency Solutions

### Honeywell

Environmental & Combustion Controls

#### Honeywell SLATE Fuel to Air Ratio Solution

The **Honeywell SLATE Combustion Efficiency System** brings configurable safety and programmable logic together into one single platform. The platform can easily be customized for almost any requirement or application. When the SLATE Fuel Air Ratio Control Module is utilized with your system it provides dual fuel capability and configurable safety. This unit provides RS-485 Modbus communications to communicate to the actuators and receive feedback. Field configurable with password protection, and it provides O2 trim and dual fuel capabilities.

#### Fireye Nexus Flame Safeguard and Combustion Control

The **Fireye NEXUS Integrated Controller** is a microprocessor based Flame Safeguard and Parallel Position Combustion Controller built into one compact user configurable package. This Fireye system consists of a controller, display, temperature and pressure sensor, servo-motor, and optional software package. The controller provides burner sequencing and proof of main valve closure plus, it will run all standard functions of the Flame Safeguard controller.

## Energy Efficiency Solutions

### Honeywell

Environmental & Combustion Controls

#### Honeywell SmartVFD Drives

For motor energy-efficiency **Honeywell offers the SmartVFD** stand alone variable frequency drive (VFD) designed to control the speed of pumps, fans, and motors in order to maximize energy efficiency. SmartVFD is also designed to run three-phase standard and high efficiency induction motors by varying the output voltage and frequency. The Honeywell SmartVFD is easy to install and communicates effectively with building automation systems to minimize energy consumption.

Energy Monitoring Products

#### E-Mon Energy Monitoring Meters

**E-Mon Energy Monitoring Meters** offers a wide variety of metering products and solutions to fit almost any application including stand alone sub meters. The meter enclosure provides various displays of energy usage data based on actual usage and can be remotely mounted up to 2,000 feet away from the panel being monitored. This allows the user to retrieve their energy data from a convenient location within their facility.
