

2013 Solution Spotlight

The Solution Spotlight program was designed to highlight GTH products and services and offer valuable insights into new technology and innovations in Industrial and Commercial control integration. Here is a look back on some of Solution Spotlights from 2013.

Emission Reduction

There are several benefits to reducing emissions in Commercial and Industrial buildings. In addition to the need to comply with local regulatory agencies, reducing emissions allows you to conserve energy and make your business more "green". At GTH, we are capable of assisting with emissions upgrades and retrofits customized to your facility. Contact your local GTH representative for more information and a free site evaluation!

Industrial Services

Since the publication of our February Solution Spotlight, we have added two new Field Technicians and a wealth of new tools and resources to better assist with Calibrations and Instrument Repair. Check the George T. Hall Company Facebook page weekly for samples of our UL Control Panels and Project Spotlights!

SCADA Programming

The George T. Hall Company is proficient with a wide range of SCADA Solutions from Honeywell, Wonderware and Schneider Electric. With our relationships with these key vendors and our experience in Industrial Control Systems, you can be confident our personnel is well-trained with the expertise required to assist with every level of your implementation.
