

Ipsen PdMetrics™ - The Power of Possibilities

Imagine a tool that allows you to anticipate disruption. A tool that gives you the power to optimize equipment performance and production efficiency. A tool that connects your team to critical information they need to make your business more agile, more competitive.

That's the power of the **PdMetrics™ software platform for predictive maintenance.**

Discover the Power of Possibilities: Watch the Video

With sophisticated monitoring and diagnostics, the PdMetrics software platform integrates with critical systems to provide you with insights never before seen in the industry.

PdMetrics™ Software Platform for Predictive Maintenance

By integrating your heat treatment equipment with the **PdMetrics™ software platform**, you can:

- Anticipate future furnace problems
- Reduce unplanned downtime
- Achieve better furnace performance through proactive maintenance
- Leverage Ipsen's vast experience through automated analysis performed by the PdMetrics algorithms
- Connect to real-time furnace visibility for faster, better decision making - from viewing dashboards at the furnace, office PC, smartphone or tablet to sending/receiving urgent alerts by text or email
- Achieve smart factory integration with furnace fleet analytics, allowing you to see the health of all furnaces at all of your facilities
- Analyze data surrounding failures to determine the root cause

After analyzing the data in our secure Diagnostic Support Center - where we look for anomalies and trends that may indicate the need for further actions - we then contact you directly with suggested next steps when needed. If a customer selects the Platinum Protection Plan, we will also immediately send a qualified technician and any needed parts to help resolve the issue. *Click [here to read the complete article](#): **Optimizing Thermal Processing Operations with Predictive Maintenance.***

GTH Calibration Services

GTH offers reliable **calibration services** custom designed to meet your process and quality requirements. We use NIST-traceable instruments to perform gas, temperature, pressure, and level calibrations on a wide range of instrumentation. We are well-versed in ISA standards and we have MSHA-certified field personnel on staff.

*Contact the **GTH office** near you for more information.*
