

## Supervisory Control & Data Acquisition (SCADA) Solutions

With recent advances in technology, SCADA systems are more accessible than ever for facilities of all sizes. Our technical proficiency and relationships with leading manufacturers allows you to benefit from the latest control system hardware and software, thereby improving your business productivity and performance.

Plus, we have a number of successful installations involving products from Honeywell, Wonderware and Schneider Electric that resulted in flexible and easy-to-use secure SCADA solutions.

### Honeywell

The Experion System from Honeywell integrates an Oil Refinery advanced automation platform and innovative software applications to improve your business performance and peace of mind. By integrating disparate data across your facility, making the most of your resources and people, and feeding it all into a unified automation system, you can achieve an operation that's more proactive, efficient and responsive!

Software Solutions for Real-Time Success™

From the award winning System Platform foundation and world renown InTouch HMI (Human Machine Interface) to the latest in industrial Mobile devices and Manufacturing Execution Systems (MES). Wonderware can provide the right application for any industrial client.

Leveraging a proven track record in a wide range of industries and expertise in the areas of instrumentation, control and data acquisition, wireless communication and IT, Schneider Electric, Telemetry and Remote SCADA Solutions can help make the most of your remote operations and assets.

In addition to SCADA systems, GTH is proficient in the communication networks and PLC systems that are inevitably part of any SCADA solution including programming, VPN, security firewall, wireless systems, Industrial Integration applications and more!
