

## Alarm Monitoring and Notification

Alarm Monitoring and Notification Software is being increasingly used in applications involving Wastewater Treatment, Power Generation, Petrochemical, Pharmaceutical and Manufacturing. With advances in automation, this technology can now provide early warnings as well as alert categories to allow operators to recognize urgent responses from less immediate concerns.

### WIN-911

WIN-911 is real-time Alarm Notification Software that works with your existing control software or SCADA system to monitor operations and notify personnel of problem conditions. With WIN-911, your operator can concentrate on other tasks while your computer system does the monitoring!

WIN-911 has direct data connections to the leading HMI/SCADA packages including Schneider, Honeywell and Wonderware as well as generic OPC and DDE connections. Currently WIN-911 is protecting 10,000 facilities in 70 countries and 6 continents.

### MOBILE-911®

Mobile-911 is an add-on module to WIN-911/PRO with special features for smartphones and web browsers. Built for Apple iOS, Android and Blackberry devices, Mobile-911 uses push notifications to alert users of new alarm events. Mobile-911 centralizes alarm messages and/or reports and presents them in an easy-to-read format, enabling operation managers and field personnel to react quickly to alarm conditions. MOBILE-911 also allows you to send acknowledgements, request alarms and query data reports all with the press of a single button.

### SCADA Vendor Partners

Interested in adding alarm monitoring to a new or existing SCADA System?  
Contact GTH for assistance  
selecting the software that is right for your application!
