

Badger Meter

It's time to improve your flow measurement and control! Badger Meter manufactures flow measurement and control products for water, oil, gas, and other fluids for a wide range of industries including water/wastewater, aerospace, food/beverage, and petrochem. They are unique in that all of their flow devices are proudly manufactured in the United States of America. They utilize highly advanced equipment in their manufacturing process including robotic welders and plasma cutters to bring you products of great quality and precision. This innovation allows Badger meters to ship quickly, even on custom products.

Preso Differential Pressure Technologies

Clean fluids, high viscosity fluids, steam, gases.

- **Gemini Cone Meter** - A cost-effective solution for differential pressure flow monitoring of digester gas, wastewater, bio gas, and crude oil. The cone-shaped element shapes the flow profile ahead of the differential pressure measurement port without impacting the flow.
- **Coin Wedge Flow Meter** - A simple principle of operation allows functionality of polymers, syrups, asphalt, tar sands, and molten sulfur.
- **Ellipse Pitot Tube Flow Meter** - With no moving parts, these meters have a long and trouble free service life. The patented elliptical design outperforms traditional devices when measuring water, steam, and air.
- **Venturi Flow Meters** - These meters provide the lowest level of permanent pressure loss in a durable unit suitable for the toughest applications.

Ultrasonic Flow Meters

These meters offer solid-state technology in a compact, totally encapsulated, weatherproof, and UV-resistant housing. They utilize ultrasonic and Doppler technology which makes them applicable for clean liquids and those with suspended reflectors. They are equipped with an easy to read LCD display screen and can be used in a wide range of commercial and industrial applications.

Flow Meter Analytics Go Mobile!

Late last year, Badger Meter released their new BEACON Advanced Metering Analytics (AMA) Mobile Solution for computers and mobile devices. This software suite automatically synchronizes meter reading data with the cloud-based BEACON AMA software any time an Internet connection is established. The information can then be accessed or shared using an authorized computer or mobile device.
