

A Year in Review

2017 was full of new projects, new capabilities, and a new certification! In November we achieved CSIA Certification which was a huge milestone for our integration business. It confirms for our customers that George T. Hall Company follows best practices in a wide range of business, project management and system development areas. We look forward to continuing on our path of continuous improvement for the betterment of our clients. was full of new projects, new capabilities, and a new certification! In November we achieved CSIA Certification which was a huge milestone for our integration business. It confirms for our customers that George T. Hall Company follows best practices in a wide range of business, project management and system development areas. We look forward to continuing on our path of continuous improvement for the betterment of our clients.

2017 Featured Spotlights

GTH Engineered Panel Solutions

The GTH Engineered Panel Solutions group utilizes our in-house expertise to design and build control panels for particular applications. These solutions are typically designed to improve efficiencies or automate an existing process. Since these designs have been pre-engineered, tested, and improved over time, you are able to benefit from our experience for a fraction of the cost of designing your own custom panel. TrakSys Smart Manufacturing Software

Smart Manufacturing and the Industrial Internet of Things (IIoT) have transformed industrial manufacturing dramatically over the past few years. By bridging the gap between planning and execution systems, these technologies give manufacturers the ability to optimize efficiencies, improve quality, and conserve energy. Parsec is on the leading edge of this technology with their TrakSYS software, a scalable Manufacturing Execution System (MES) that provides monitoring, measuring, reporting and analytics to run your manufacturing operation more effectively. [Click here to learn more...](#)

Honeywell Thermal

With a number of key acquisitions in the past years, and the creation of their Thermal Solutions division, Honeywell has recommitted themselves to the combustion marketplace. HTS solutions streamline integration, installation, and end-user interaction while improving efficiency and performance. Their portfolio of products includes Honeywell combustion controls, Eclipse and Maxon burners, Kromschroder control valves, and Iris flame scanners. Honeywell Thermal Solutions is investing in the combustion industry with innovation and scalability for the future. [Click here to learn more...](#)

2017 Solution Spotlights

Our monthly Solution Spotlight program highlights GTH products and services and also offers valuable insights into new technology and innovations in Industrial and Commercial control integration. Here is a look back on our Solution Spotlights from 2017. [Click a Spotlight to download!](#)

Looking Forward

We are looking forward to adding many more projects to our project portfolio in 2018. In addition to new vendor partners, products, and technologies, we are planning to release new custom panel solutions to help our customers streamline operations, improve efficiencies, and modernize their facilities.

Thank you for your business in 2017. We wish you a happy and prosperous 2018!
