

## Looking Forward to 2021

With 2020 finally behind us, we are looking forward to some exciting changes at GTH. We are aligning all areas of expertise with our Core Values to provide quality and consistency for our clients, vendors, and employees.

### System Integration

We continue to grow our project portfolio with new automation opportunities. Our team designed and executed projects in several growing industries including cannabis, corrections, and security. We were also fortunate enough to work on a COVID project for Operation Warp Speed.

### Thermal & Process

The thermal & process market continues to be driven by ever-tightening government regulations. In addition to NFPA and AQMD, our team is preparing for the new AMS2750F regulations for the aerospace & heat treat industries. Working with our vendor partners, we are already helping our customers through compliance.

### UL Control Panels

Our team was run through both ISO and Lean training in 2020 in preparation for ISO9001 certification this year. This training has helped us improve our internal processes, resource management, quality, and customer service. We look forward to putting these into practice in 2021 and beyond.

### Industrial Services

As an essential business, we continue to provide field and project services to our clients with enhanced safety measures including health screens, sanitizing, and PPE. Our field personnel are also benefiting from ISO in the areas of quality, training, and customer service.

#### Our Expertise

We take pride in the breadth and depth of our product and control system expertise.
